## MANAGER'S REPORT:

**Field Maintenance** – Manager David Sale reported that the district flushing program is completed for the next six months. The results looked great and will reduce the amount of water needed to continue testing.

Valve Maintenance is nearing completion for the first time in years.

Willow pump went down, as we expected after learning the pump curves, and how to select the proper pump for the application. Sam Crum came up and took volt and amp readings on the other three working booster pumps. Found another with some bad windings in it. He is getting together a quote for two new pumps that are sized according to the pressure at the sites along with the flow needed. This will allow us to pump more water and have more efficiency.

The state PFA's results came in. These results were easier to read. It shows we have some PFB's in a couple of wells with a result of 13 nanograms. A nanogram is one billionth of a gram. The notification level is 500, and the action level is 5,000.

**General Manager** – Manager Weddle reviewed the usage data for the past 12 months showing that 80% of households are using less than 700 gallons per month on average. For households using greater than 1300 gallons per month, that number drops between 1.8% and 6% depending on the month. Because of this, Staff supported revisiting the District tiers and lowering the top tier from 1300 to encourage water savings among the residents.

## MONTHLY WATER PRODUCTION REPORTS:

Manager Weddle reviewed the water production reports for the month of October. He pointed out how the billing error affected the loss for August and September and that it had been adjusted to reflect the actual billing.

## DIRECTORS' REPORTS:

1. Director's reports: None.
2. Requests for Future Agenda Items:
3. Staff Items: No other items
